

From Concept to Realized Savings: Energy Efficiency

Energy Management Workshops

Energy efficiency is a relatively straightforward cost-reduction lever for the automotive industry. However, three primary hurdles that are known to stall businesses are: knowledge gaps, funding decisions and execution challenges. Companies like yours are currently navigating unprecedented business disruptions, economic and otherwise, making it an ideal time to move cost savings projects beyond the concept phase. Take action with ENGIE Impact's **Energy Management Workshops**, which kick start the roadmap process while delivering tangible results, including an estimated **5%-15% in energy cost reductions**.

Realized Results

One auto parts manufacturer, with close to 100 sites in a dozen countries and an annual energy spend of \$115 million, found **\$19 million (15%) in energy savings across more than 750 projects**.

How it Works

Energy Management Workshops are a collaborative auditing and training program to identify energy supply and demand as well as renewable and clean energy projects.

Our process includes:

- 48 hours of project work spanning 8 weeks
- A pilot with 10-15 sites that can be replicated across your portfolio of auto plants
- Senior management through plant-level management alignment

Outcomes

ENGIE Impact's team of leading Certified Energy Managers will collaborate with you to earn strong buy-in from project participants and leadership, establish site-specific benchmarks, and identify a clear path forward. By the end of the process, you'll have 3-5 focused projects per participating site that will result in an estimated **5%-15% of energy cost reductions**.

Energy Management Workshops are a solution that you can activate today to drive sustainable transformation.

When you contact ENGIE Impact, you'll chat with experts who have experience in the auto industry. Let's talk!

Financing Options & Expected ROI

Anticipated savings are expected to exceed the agreed-upon cost of the Energy Management Workshop. ENGIE Impact's at-risk pricing model means little to no capital investment for your auto company, **giving you quicker savings that can be applied immediately**.

Value

Value of training & support provided, value of energy savings identified

Speed

An efficient method with minimal demands on participants

Scale

Seamless transition from pilot into full development

Engagement

Collaborative action resulting in buy-in
